

How To Guide: NATURAL CHALK + CLAY PAINT

STEPS:

1. Clean (citrus degreasers are great) and dry object to be painted.
2. Remove any flaking or chipping old finish.
3. Vigorously shake can for 1-2 minutes.
4. Remove lid and stir thoroughly.
5. Remove needed amount from can (we recommend a syringe or baster which keeps your can edge tidy) and put into separate container.
6. Depending on your desired result and personal preference, you may thin the paint out by adding a small amount of water to your work container of paint.
7. With a good quality brush or roller, apply one coat.
8. Allow paint to dry. Generally 2-4 hours is acceptable drying time before application of an additional coat. As the paint dries, it will become lighter than it is when it is wet.
9. Repeat with second coat, if needed.
10. Once your piece has dried completely, you may apply your finish. You can burnish with a piece of brown kraft paper or very fine grit sanding block over your piece before and/or after you apply your finish coat.

PRO TIPS:

Store and use between 55°-95° degrees F.
